compile_behavioral_data

September 15, 2019

1 Imports

```
[1]: import pandas as pd; import os; from analysis_helpers import *; import warnings
     warnings.filterwarnings('ignore')
```

2 Data Compile

Organize behavioral data from each participant into one dataframe for the whole experiment.

```
[2]: data_dirs = ['../sustained_attention_experiment/data','../
     →variable_attention_experiment/data']
     filenames = ['../parsed_data/behavioral_data_sustained.csv', '../parsed_data/
     →behavioral_data_variable.csv']

     for data,file in zip(data_dirs, filenames):

         sub_list = []

         for sub_dir in os.listdir(data):
             sub_list.append(add_level(sum_pd(data + '/' + sub_dir)))

         exp_raw = pd.concat(sub_list)
         exp_raw.to_csv(file)
```
